Designing The main reason for using AutoCAD is to create something new. Designing your own work (such as house plans) or use of drawings (such as structural plans) is not allowed in the AutoCAD environment. Toolbars The design-oriented user interface of AutoCAD

---

includes toolbars for easy and quick access to commands, even on the ribbon. Toolbars can be grouped together in a toolbar group.

Toolbars can be re-ordered and re-sized to create the toolbar layout that suits you the most. You can customize your own toolbar layout using a toolbar editor or toolbars window in the Customize User Interface dialog box. You can also re-arrange the order and size of toolbars in the Customize User Interface dialog box. It is also possible to display a drop-down

---

menu for a toolbar, instead of a text label. If you make the change with a toolbar, a drop-down menu will be displayed for the toolbar's name. You can toggle between text labels and drop-down menus for a toolbar. If you change a toolbar's label, the text label will be replaced with a drop-down menu for the same name. You can toggle between text labels and drop-down menus for a toolbar. Customize User Interface Dialog Box Selecting the Customize User Interface option from the User Interface menu will open the

---

Customize User Interface dialog box, where you can select the type of ribbon that you want to use, and where you can select the application version, program preferences, the appearance of the program, and other options. Ribbon The main ribbon in AutoCAD is the drawing ribbon. At the top of the drawing ribbon is the ribbon toolbar, which is a menu with tool-like icons or toolbar items that you can move around on the ribbon. The toolbar items are self-explanatory and are linked to AutoCAD commands or

---

tools that are accessible through the Ribbon interface. The ribbon toolbar can be modified using the Customize User Interface dialog box. In the custom toolbar, click the Numbering Icon to change the numbering format from decimal to hexadecimal or vice versa. This is a global setting. If you want to change the number format for just one toolbar, click the Formatting Icon.

Drawing Tools The toolbars are divided into eight categories: Home, Drafting, Vertex,

AcDbMerge - an application for batch or real time merging of DWF or DXF files. The application does not support adding spline curves to CAD drawings but uses Microsoft's Graphite (the application is a front end to the Microsoft COM component used to communicate with the CAD application).

Autodesk Maya Autodesk Maya has a Microsoft ActiveX control for integrating AutoCAD and Maya called ACMX. It has a great number of Python API wrappers that are based on internal AutoCAD internal
