(AP Photo/Alex Brandon) President Donald Trump speaks during a joint press conference with French President Emmanuel Macron at the White House in Washington, Thursday, April 12, 2018. (AP Photo/Alex Brandon) WASHINGTON (AP) — President Donald Trump on Thursday abruptly ended a joint news conference with French President Emmanuel Macron after the French leader said a strong national border wall could be part of U.S.-European trade talks. The exchange was the latest in a contentious relationship between the two leaders. Trump walked out of the White House in a huff after Macron's comments, although the French leader was speaking directly to journalists when he made the remarks. ADVERTISEMENT The president later told reporters that the relationship between the two countries is "excellent" and "powerful," and that he has a "great relationship" with Macron. But Trump said he wants to end the news conference. Macron's comments about border walls, which came in response to a question about the trade relationship between the U.S. and the European Union, infuriated Trump. In a tweet earlier Thursday, Trump said he canceled the news conference with Macron because of the French leader's "very rude" comments about the border wall. "Would have been a great press conference with leaders of France and Germany," Trump tweeted. "Unfortunately, Emmanuel Macron refused to say the words 'Radical Islam', only saying that he 'rejected' the label. I want to see him are to say that he 'will not agree' to this stupid name!" Macron had been asked by a journalist during the news conference what he thought of the administration's plan to build a wall on the border with Mexico.

What's New In AutoCAD?

The AutoCAD software will also now offer the option to add comments directly to the drawing objects, using a feature called Markup Assist. In order to enable these features, check the "Markup Import" and "Markup Assist" boxes in the "View" menu of the preferences dialog. Improved Drawing Output for Large Drawings: When you output a large drawing, the new improved drawings now support the advanced features of AutoCAD that are designed for large drawings, including Layers, model database creation, and rendering. Edit 2D Objects in 3D: You can use the command Line Style and Edit 3D Views to edit two dimensional (2D) objects in 3D. For more information on this new feature, see "Edit 2D Objects in 3D," in the Help menu. AutoCAD now offers you the flexibility to quickly navigate to your favorite workspaces from the command line. The command Prompt indicates that you're in a workspace. You can access your favorite workspaces by typing the appropriate name of the workspace. Direct 3D Modeling Creation with CAD command: The new CAD command will create a direct 3D model of a selected part. The model will include all necessary datum options, including the option to create a 2D coordinate system. When using a 2D coordinate system, the exported model will have an accurate scale, and you can use it for any future plan views or in AutoCAD Map or AutoCAD Structural for layout. Shape Outlines/Ray Visibility Improvements: The new Ray Visibility and Shape Outlines features in AutoCAD will make it possible for you to create a basic representation of a complex 3D object, including its shape, by creating edges or rays. This is done by drawing a set of slices on a plan view or section view. For more information on how this feature works, see "Shape Outlines and Ray Visibility," in the Help menu. 3D Model Database: The new 3D Model Database feature will allow you to open an existing 3D model, and a copy of it, as a new object. For example, you could create a 3D model of a project you are working on, and then use this new object to create new views, views that include a 2D coordinate system, or maps
