AutoCAD for Android. AutoCAD is available as a desktop app or as a mobile and web app. Drawing AutoCAD is used to create 3D designs that can be viewed in any viewing environment, from two-dimensional (2D) programs such as Word, Excel, PowerPoint, and PDF to a 3D program such as AutoCAD. For example, drawings created with AutoCAD can be viewed and manipulated as three-dimensional images in a 2D program. The most common type of drawing in AutoCAD is 2D drafting. 2D drafting enables you to work on a drawing by using the keyboard and mouse to move the cursor and select objects. AutoCAD offers a variety of predefined and custom-created objects. Examples of 2D objects include: Rectangles Polylines Ellipses Arrows Rounded rectangles Pieces Text boxes Line segments Triangles Columns Themes Document and drawing templates are available for use. Templates are collections of objects that save you time, and they are located under File > Open and Save Templates. There are dozens of template sets. The following are the most frequently used template sets. The decision has been supported by the Home Office, but it is by no means certain how the decision will be implemented. One of the most commonly used detention facilities for asylum seekers is in the Scottish Borders, in the form of the Tinsley House Immigration Centre, which has been operating since 2002. On the 29th of January, the Secretary of State for Justice, the Lord Keenan, who is the government minister responsible for Border Agency detention centres in England and Wales, announced that the centres would no longer receive any new applications. The announcement came after the Scottish government said that it would not accept any more asylum seekers from England who were already in Scotland. Several politicians and campaigners were angered by the decision to cease receiving new applications and also by the decision to only accept those already in the centres. Andrew Smith, leader of the Scottish National Party, said that he had "every confidence that our borders will be secure and we'll continue to protect the rights of those fleeing persecution". He went on to say that it would be a "disaster" for people to be "jumped-up in camps". An alternative option was proposed by Julian Lewis MP, a former chairman of the UK Parliament's Home Affairs Select Committee, who is now chair of the Joint Committee on Human Rights. His proposal was for those already in detention to be transferred to "secure", but "unconventional" locations such as hotels. This has been criticised for its lack of access to legal aid, for its lack of privacy, and af5dca3d97

Since 1999, West Nile virus (WNV) has been circulating in the United States. Recently, 2 children aged 3 and 14 years, respectively, who were diagnosed with WNV neuroinvasive disease after close contact with a dead bird in a child's backyard in New York City were described. In October 2013, the New York City Department of Health and Mental Hygiene (DOHMH) reported 3 other cases of WNV neuroinvasive disease in adults with close bird exposure. This report presents an epidemiologic investigation and infection control measures implemented to prevent the reoccurrence of WNV-related illness in children in New York City. DOHMH conducted a detailed epidemiologic investigation of the index child who presented with encephalitis. The family and their neighbors were interviewed to determine WNV exposure risk factors. Samples of the dead bird and the index child's yard were tested for WNV RNA. After counseling and risk-reduction measures, the index child and her family were referred to and followed by their pediatrician. A case-contact investigation was performed to identify and counsel other children at increased risk of developing WNV disease, and to determine if preventive measures should be implemented. All 3 cases were associated with a backyard in which a dead bird was found. The index child's grandparents and 2 family dogs were exposed to the bird. All 3 children developed symptomatic WNV infection, but none developed neuroinvasive disease. The New York City experience suggests that if bird removal measures are properly implemented, children exposed to WNV-infected birds remain healthy. In the absence of bird removal measures, children exposed to
